Solomon Smith

Montclair, CA | (530) 513-1936 | solomonsmithdev@gmail.com
linkedin.com/in/solomonsmithdev | github.com/SolomonSmith-dev | solomonsmith.dev
AI/Backend Engineer | B.S. Computer Science, Dec 2026 | Available January 2027

Education

California State University, San Bernardino, B.S. Computer Science Dec 2026
Relevant coursework: Machine Learning, Algorithms and Data Structures, Database Systems, Operating Systems

Experience

Founding Engineer (2nd engineer) Jul 2026 to present
Recursa AI / CourtRules (courtrules.app), legal-data platform covering filing rules for 1,653 judges *Remote*

- Shipped retrieval-grounded Q&A on judge pages, which carry 57% of site pageviews: fetches filed court orders from object storage, extracts per-page text, grounds the model in it, and streams answers as NDJSON (Next.js, Supabase).
- Designed a fail-closed citation verifier: a claim renders only if its quote appears verbatim in the source. Its tests caught a bypass where an invented quote passed on a plausible source index, fixed before release.
- Built query analytics that classify questions into a 14-type rule taxonomy, plus a Postgres view ranking unanswered questions to separate data gaps from retrieval failures (service-write-only RLS).
- Added iCal and CSV court-calendar exports (RFC 5545, RFC 4180) with a formula-injection guard (CWE-1236).

Full-Stack Developer (Contract) Jun 2025 to Sep 2025
RideSplits *San Bernardino, CA*

- Migrated auth from custom JWT to Firebase Auth for rider and driver roles with role-based Firestore rules.
- Built the Team B user-system backend in Node.js, Express and MySQL: bcrypt auth with university-email validation, profile, verification and payment-account endpoints, a shell test script, and API integration docs for the other teams.
- Built a multi-step ID-verification upload flow with client-side file-type and size validation.

Open Source

CivicBand clerk-fetchers | *PR #85, merged Jul 2026* github.com/civicband/clerk-fetchers/pull/85

- Built a generic Swagit fetcher (Python): any Swagit-hosted city is added with two registry entries and no new code.
- Normalized meeting dates to ISO-8601 and added offline pytest coverage against recorded HTML fixtures.

Projects

ARDA, multi-agent service | *LangGraph, LlamaIndex, Redis, MCP* github.com/SolomonSmith-dev/arda

- Built a LangGraph orchestrator on native Anthropic tool_use with a Redis-backed executor, LlamaIndex RAG, and an MCP server behind 17 documented FastAPI routes.
- Designed a mock LLM and embedder layer so the 577-test suite runs offline in under 15 seconds; runs 24/7 on a self-hosted Debian server.

SOC Triage AI, RAG alert triage | *Claude, Streamlit* github.com/SolomonSmith-dev/soc-triage-ai

- Built a six-stage pipeline: regex observable extraction, retrieval over MITRE ATT&CK, a guardrail that refuses out-of-scope alerts, context-constrained generation, and JSON schema validation.
- Raised reliability-harness pass rate from 3 of 7 to 7 of 7 cases by reworking corpus chunking; shipped a Streamlit analyst UI.

PhishGuard | *LightGBM, ONNX Runtime, FastAPI* github.com/SolomonSmith-dev/phishguard

- Found and fixed label-polarity and distribution leakage in the PhiUSIIL dataset (every legitimate URL began with https://www). Documented the methodology in LIMITATIONS.md and added leakage tests to pre-commit.
- Trained a LightGBM URL classifier to 0.9943 test AUC at a 1.54% false-positive rate on Tranco top-5,000 domains; served via FastAPI with ONNX Runtime.

Skills

Backend/Infra: FastAPI, Next.js, Node.js, PostgreSQL/Supabase, MySQL, Redis, Firebase, Docker, GitHub Actions, Linux
Languages: Python, TypeScript, SQL, C++, Bash
AI/ML: LightGBM, scikit-learn, ONNX Runtime, LangGraph, LlamaIndex, Anthropic SDK, sentence-transformers
Prior career: Professional kitchens, 10+ years: Dishwasher promoted to Head Chef
