SUMMARY

Software engineer building LLM-backed backend features that fail closed. Shipped a production retrieval-grounded assistant with a citation-verification layer at a legal-data startup; built a multi-agent FastAPI service with a 400+ test suite that runs offline. Python, TypeScript, Postgres, FastAPI, Next.js. B.S. Computer Science, Dec 2026. Seeking AI/ML or backend engineering roles, January 2027.

EXPERIENCE

Founding Engineer (second engineer, two-person team)

Jul 2026 to present, remote

Recura AI / CourtRules (courtrules.app), legal-data platform covering filing rules for 1,653 judges

- Shipped the product's retrieval-grounded Q&A feature on judge pages: fetches filed court orders from object storage, extracts text per page, grounds the model in that text, and streams verified answers as NDJSON (TypeScript, Next.js, Supabase).
- Designed the answer path to fail closed: a claim renders only if its quoted sentence appears verbatim in the source; 7 unit tests on the verifier caught a bypass where an invented quote passed on a plausible source index, fixed before release.
- Built query analytics that classify user questions into the product's 14-type rule taxonomy and a Postgres view ranking unanswered questions to separate data gaps from retrieval failures (service-write-only RLS).
- Added iCal and CSV court-calendar exports with RFC 5545 line folding, RFC 4180 quoting, a CSV formula-injection guard (CWE-1236), and schema.org Dataset markup; 35 tests.
- Authored the repository's first README and .env.example and automated the shared-package build so a fresh clone runs without manual steps. 4 merged PRs, 42 commits into an 800-commit codebase.
- Judge pages carry 57% of site pageviews (PostHog, 90 days).

Full-Stack Developer (contract)

Jun 2025 to Sep 2025, San Bernardino, CA

RideSplits, early-stage logistics startup

- Migrated authentication from custom JWT to Firebase Auth across rider and driver roles and implemented role-based access rules for Firestore and Storage.
- Built a multi-step ID-verification upload flow with client-side validation, file-type and size limits, and documented the security rules for the team.

PROJECTS

ARDA, multi-agent service on FastAPI

github.com/SolomonSmith-dev/arda

- Built a LangGraph orchestrator on native Anthropic tool_use with a Redis-backed executor, LlamaIndex RAG, and an MCP server, exposed through 17 documented routes on one FastAPI surface.
- Designed a mock LLM and embedder layer so the full 425-test suite runs with no API keys or network in 13 seconds; CI gates on ruff, mypy, and pytest. 41 test files, roughly 6,300 lines of tests against 7,800 of source.
- Deployed and operate it 24/7 on a self-hosted Debian server under PM2 over a Tailscale mesh; hardened startup to fail closed on a missing API key.

PhishGuard, phishing URL classifier

github.com/SolomonSmith-dev/phishguard

- Trained a LightGBM URL classifier to test AUC 0.9943 with a 1.54% false-positive rate on Tranco top-5000 domains; served via FastAPI with ONNX Runtime.
- Found and fixed label-polarity and distribution leakage in the PhiUSIIL dataset (100% https://www on legit rows), added leakage tests to pre-commit, and documented the methodology in LIMITATIONS.md; 34 tests.

SOC Triage AI, RAG-grounded alert triage

github.com/SolomonSmith-dev/soc-triage-ai

- Built a six-stage pipeline: regex observable extraction, sentence-transformer retrieval over a MITRE ATT&CK corpus, a similarity guardrail that refuses out-of-scope alerts, Claude generation constrained to retrieved context, and strict JSON schema validation.
- Raised the reliability harness from 43% to 100% (7 of 7) by reworking corpus chunking; shipped a Streamlit analyst UI with evidence panels and override tracking.

EDUCATION

B.S. Computer Science, California State University, San Bernardino

Dec 2026

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C++, Bash

AI/LLM: Anthropic SDK, LangGraph, LlamaIndex, RAG, pgvector, ChromaDB, sentence-transformers, eval harnesses, structured output validation

Backend: FastAPI, Next.js, Node.js, Express, PostgreSQL, Supabase, Redis, BullMQ, REST, MCP

ML: scikit-learn, LightGBM, PyTorch, ONNX Runtime

Infra: Docker, GitHub Actions, Linux, PM2, Tailscale, pytest, Vitest, mypy
